

SK-5 KILLER

SIMMONS SK-5 FEATURES

The **SIMMONS SK-5** is the most efficient automatic killer available. The **SK-5** has a unique combination of rapidly revolving restraining rollers and a "bicycle wheel" to capture the birds' heads and convey them to the killer blade. This helps prevent wings from being cut and always places the head in a correct position to cut the vessels on both sides of the neck (a full-ventral or "kosher" cut), resulting in a very rapid blood loss, usually in a range of 85 to 90 seconds.

The **SIMMONS SK-5** was the first successful automatic killer ever built and still offers the standard of performance which no other killer can match.

Stainless steel construction.

Hydraulic drive - less down time.

Hydraulic pumping system with primary and standby pumps.

Operates consistently at all line speeds.

Large and small birds in the same flock accommodated.

More yield - less meat left on the head.

"Kosher" cut for maximum bleed out.

Shorter bleed time - better picking.

SK-5 KILLER - Chickens

Manufactured by: *Simmons Engineering Company*

INSTALLATION INFORMATION AND REQUIREMENTS

The hydraulic pumping system and reservoir furnished with the SK-5 Killer has primary and standby pumps. Each pump has a 5hp. 230/460/3f motor. A three-way switch mounted near the killer allows easy change from primary to standby pump in case of low hydraulic pressure. The SK-5 Killing System package also includes flexible hoses, check valves and oil filter for connections at the pumping system and at the killing machine. The customer is responsible for furnishing motor starters, hydraulic fluid (Amoco type Rykon 68 or equivalent), and interconnecting steel pipe from the pumping system to the killing machine - consult factory to determine size of pipe needed for your installation. A water supply line (3/4" diameter) is needed for the killing machine.
