DURABLE • ECONOMICAL • EFFICIENT • QUALITY

C-Tech quality is the result of manufacturing to rigidly high standards of production control, using technically specified rubber. Malaysia has long been recognised as an international leader in rubber technology and production.

C-Tech standards are based on three key areas – quality of ingredients; techniques of rubber compound mixing; and the moulding process.

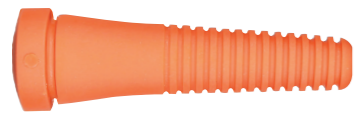

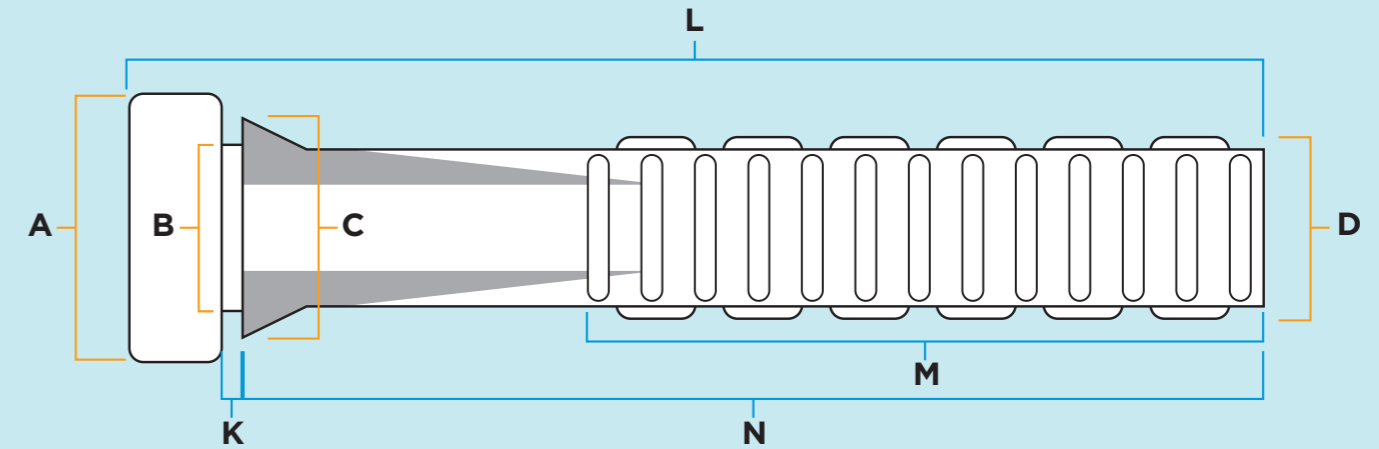

The C-Tech formula used for these three functions are proprietary. They are not for sale or use by third parties and are the result of extensive tests in laboratories and field environments.

C-Tech performance has been consistently proven in use by all the most popular defeathering machines in the world over: reduction in breakage, premature

wear, and 'aging' explain why C-Tech plucking fingers have become a world market leader.

C-Tech is competitively priced, and in combination with its renowned performance, will further reduce your overall production cost without compromising efficiency and quality.
